

Small Cap Market Snapshot

DATA AS OF 4/30/2024

WHAT'S NEW

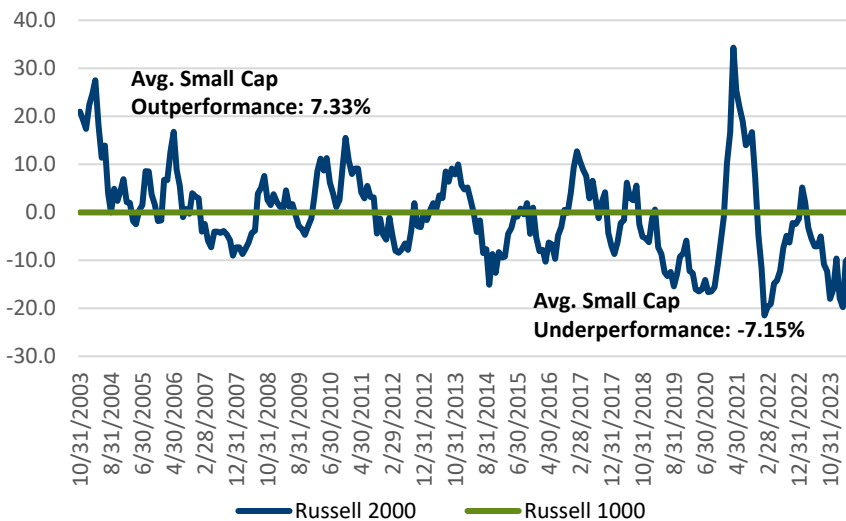

Mainly due to rising bond yields, small caps struggled in April, falling 7% and lagging large caps by 278 basis points (Russell 2000 versus Russell 1000). Many investors are reluctant to fully embrace small caps until they become more confident that the Federal Reserve will be cutting interest rates in 2024. It seems the Fed wants to cut rates but needs to see more disinflationary data points to act on.

In the meantime, the bull market for small caps has begun but is only six months old, and valuations relative to large caps remain stretched to the downside (9th percentile). Historically when things get this offside, small caps outperform large caps by 600 basis points over the next 12 months. Anticipation of the Fed cutting rates (and then actually cutting them) will likely be the catalyst that initiates the normalization process.

Information contained herein is for informational purposes only and should not be considered investment advice. The **S&P 500** Index is a market-value weighted index consisting of 500 stocks chosen for market size, liquidity, and industry group representation. It is widely regarded as the standard for measuring US stock-market performance. The **Russell 1000 Index** measures the performance of the large-cap segment of the US equity universe and includes approximately 1000 of the largest securities based on a combination of their market cap and current index membership. The **Russell 2000 Index** measures the performance of the 2,000 smallest companies in the Russell 3000 Index, which represents approximately 8% of the total market capitalization of the Russell 3000 Index. You cannot invest directly in an index. The **Russell 2000 Growth** Index measures the performance of the small-cap growth segment of the US equity universe. It includes those Russell 2000 companies with higher price-to-value ratios and higher forecasted growth values. The Russell 2000 Growth Index is published and maintained by FTSE Russell. The **Russell 2000 Value** Index measures the performance of small-cap value segment of the US equity universe. It includes those Russell 2000 companies with lower price-to-book ratios and lower forecasted growth values. The **Russell Microcap** Index measures the performance of the microcap segment of the US equity market. Microcap stocks make up less than 3% of the US equity market (by market cap) and consist of the smallest 1,000 securities in the small-cap Russell 2000® Index, plus the next 1,000 smallest eligible securities by market cap. The **Russell Microcap Growth** Index measures the performance of the microcap growth segment of the US equity market. It includes Russell Microcap companies that are considered more growth oriented relative to the overall market as defined by Russell's leading style methodology. The **Russell Microcap Value** Index measures the performance of the microcap value segment of the US equity market. It includes Russell Microcap companies that are considered more value oriented relative to the overall market as defined by Russell's leading style methodology.
