

# Small Cap Market Snapshot

DATA AS OF 5/31/2024

## WHAT'S NEW

After a rough April, small caps bounced back in May, rising 5% and outperforming large caps by 31 basis points (Russell 2000 versus Russell 1000). Small caps are up 3% YTD, but are meaningfully lagging behind large caps, which are about 10.5% higher.

Although small caps overall have not done much this year, the market has shown a willingness to selectively reward small cap stocks showing outstanding company-specific fundamental strength. One would think that should always be the case, but for the prior two years the market has been too obsessed with macro concerns (for example, the Fed tightening cycle) to hand out much small cap love.

If the market starts getting more confident in Fed rate cuts, a broader relative rally in small caps seems likely. Small cap valuations relative to large caps are in the 15<sup>th</sup> percentile. Moreover, the top 5 names in the S&P 500 are 3.59x the size of the entire Russell 2000, the highest level since the Russell 2000 was created in 1979. A catch-up trade may be in order.

Information contained herein is for informational purposes only and should not be considered investment advice. The **S&P 500 Index** is a market-value weighted index consisting of 500 stocks chosen for market size, liquidity, and industry group representation. It is widely regarded as the standard for measuring US stock-market performance. The **Russell 1000 Index** measures the performance of the large-cap segment of the US equity universe and includes approximately 1000 of the largest securities based on a combination of their market cap and current index membership. The **Russell 2000 Index** measures the performance of the 2,000 smallest companies in the Russell 3000 Index, which represents approximately 8% of the total market capitalization of the Russell 3000 Index. You cannot invest directly in an index. The **Russell 2000 Growth Index** measures the performance of the small-cap growth segment of the US equity universe. It includes those Russell 2000 companies with higher price-to-value ratios and higher forecasted growth values. The Russell 2000 Growth Index is published and maintained by FTSE Russell. The **Russell 2000 Value Index** measures the performance of small-cap value segment of the US equity universe. It includes those Russell 2000 companies with lower price-to-book ratios and lower forecasted growth values. The **Russell Microcap Index** measures the performance of the microcap segment of the US equity market. Microcap stocks make up less than 3% of the US equity market (by market cap) and consist of the smallest 1,000 securities in the small-cap Russell 2000® Index, plus the next 1,000 smallest eligible securities by market cap. The **Russell Microcap Growth Index** measures the performance of the microcap growth segment of the US equity market. It includes Russell Microcap companies that are considered more growth oriented relative to the overall market as defined by Russell's leading style methodology. The **Russell Microcap Value Index** measures the performance of the microcap value segment of the US equity market. It includes Russell Microcap companies that are considered more value oriented relative to the overall market as defined by Russell's leading style methodology.
